

# Military SCALE MODELLER International

## February 2013

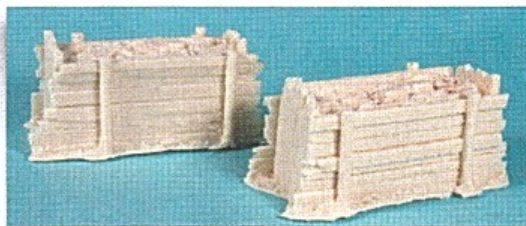

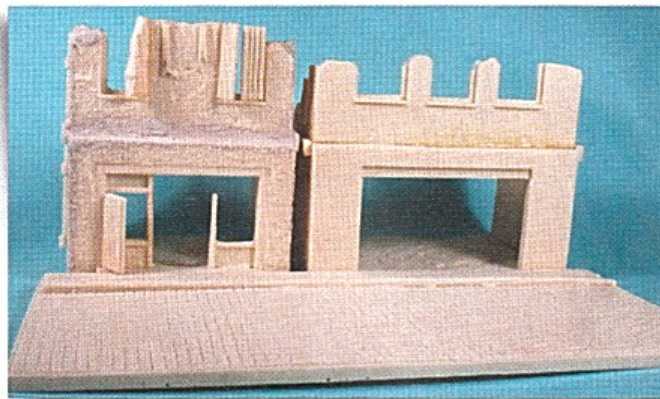

### aDM Models – Buildings

Manufacturer: aDM  
Scale: 1:72 and 1:76  
Kit Type: Cast Resin  
Kit Numbers: Various

#### Tom Cole

aDM Models produce a small but growing range of war-torn buildings and scenic accessories. Proprietor Stephen auf der Mauer has to date specialised in 1:35 and 1:48 but has recently (after a chance meeting at the Letchworth Model Show) decided to branch out in 1:72 and 1:76. His small scale range currently includes: European/French Cafe/Shop Ruin, Industrial Building/Workshop Ruin, Cobbled Road with Pavement, Betonfundament – German Cast Concrete Gun Mount, and Panzersperre – German Road Block, all of which come in a cream resin finish. The ruins are in several parts and the others are cast as single pieces.

The buildings are two storeys with some nicely done brickwork on the Industrial Building and rough render on Cafe/Shop. Everything goes together easily although the cover beams on the side walls were thick and needed to be sanded down to

the correct thickness – and take great care when doing this as resin dust is very nasty - so take appropriate precautions. I used an epoxy resin to glue the buildings together and this produced a strong model that will

take rough handling on the Wargames table. A set of detailed instructions are included and the buildings come complete with floors cast in resin and a small embossed sheet that can be used to represent floor boards.

Also included in the Cafe are some separate resin shutters and these and the floorboards can be cut to size. The individual items are all well cast and have lots of detail.

This range is suitable both for Wargamers and for serious modellers who want to build dioramas and these sets can be combined to make larger buildings. These are bound to be popular with small scale enthusiasts and no doubt the range will expand in the future. Highly recommended to modellers of all skill levels.

Many thanks to aDM Models for the review samples.
